Reproductive System Disorders

SCHALI® Care-MR Rectal Suppositories are a male personal care hygiene product intended for general strengthening, toning and stimulating effects, better sexual function in scope of complex treatment and prevention of reproductive system disorders and erectile dysfunction.

PRODUCT FORM:

Lubricating prophylactic suppositories, 2 g.

INGREDIENTS:

The product contains environmental friendly biocompatible ingredients of plant and mineral origin.

Cocoa butter, Pumpkin seed oil, Bee glue, Camelliae Sinensis non fermentata folia extract, Ginseng Radix extract, Liquiritiae radix extract, Griffonia simplicifolia seed extract, Vitamin E, Titanium dioxide.

MECHANISM OF ACTION:

Based on natural plant oils and butters, minerals and phytoextracts, the product dissolves slowly in the rectum, where it is absorbed by rectal mucosa and exerts anti-inflammatory and regenerating effects. The product acts locally by strengthening vascular walls and improving microcirculation in capillaries. Mechanism of action is directed to improve cellular metabolism and to enhance blood supply to pelvic organs by inducing delivery of necessary nutrients and oxygen to cells.

Plant and mineral ingredients and their constituents are beneficial to male health and promote metabolic processes, vegetative and endocrinal regulation, resulting in better vascular tone in urogenital organs, wider peripheral blood vessels, and more blood supply to genitals. This induces central mechanism of erectile regulation and increases libido.

Ginseng is a widely known stimulating agent that enhances redox reaction and gives rise to general metabolism. As the result, fat breakdown is accelerated, panaxinon (glycoside) induces male endocrine system and promotes production of male sex hormones. Ginsenoside (glycoside) contributes to better regulation of carbohydrate metabolism, lower blood glucose and higher glycogen synthesis.

Regular use of the product promotes production of testosterone, increases duration of erection and sexual desire.

The product is intended for personal care purposes, has preventive action and may be used as a complex therapy agent in treatment of a wide range of male reproductive system disorders for better male health, higher immunity defence (induced specific and non-specific factors) and better immune response.

Hypoallergenic product.

INDICATIONS:

Sexual Dysfunction:

- Libido disturbance (low libido, loss of sexual desire, lack of sexual pleasure)
- Sexual arousal disturbance (low erection, no erection)
- Orgasm disturbance (premature ejaculation, bradyorgasmia, hypoorgasmia, anorgasmia)
- Fears, "syndrome of anxious expectation during sex".

METHOD OF USE:

For rectal use only.

Take the product out of the package with clean hands and insert, pointed end first, into the rectum, while lying on your side. Apply one suppository 2 times a day for one month. Extend your course of treatment up to 90 days, if necessary.

SIDE EFFECTS:

No side effects found.

No product dependence and no rebound syndrome.

CONTRAINDICATIONS:

No contraindications detected.

STORAGE CONDITIONS:

Keep the product in a dark cool place at the temperature between +4°C and 15°C.

SHELF LIFE:

Shelf life is 2 years from the date of production.

Do not use the product after expiration of the date of production, specified on the package.
